S8 Scanned ${ }^{1} \mathrm{H}$ and ${ }^{13} \mathrm{C}$ spectra for all compounds prepared

General. All ${ }^{1} \mathrm{H}$ and ${ }^{13} \mathrm{C}$ NMR spectra were recorded at 400 and 100.5 MHz respectively. All melting points are uncorrected. Thin layer chromatography (TLC) was performed using commercially prepared 60 mesh silica gel plates, and visualization was performed with UV light ( 254 nm ) and an acidic $\mathrm{KMnO}_{4}$ solution. Low resolution mass spectra were recorded on a triple quadripole mass spectrometer. High resolution mass spectra were recorded on a double focusing magnetic sector mass spectrometer using EI at 70 eV .

Reagents. Iodine, acetic anhydride, pyridine, 1,3-cyclohexadiene, and 2,3-dimethyl-1,3-butadiene, $o$-iodophenol, methyl p-hydroxybenzoate, $p$-hydroxyacetophenone, p-hydroxybenzaldehyde, $p$ nitrophenol, $o$-methoxyphenol, $m$-methoxyphenol, $p$-methoxyphenol, resorcinol, $\beta$-naphthol, trans, trans-2,4-Hexadiene ( $95 \%$ pure) were purchased from commercial sources. 2-Iodophenol acetate (1), ${ }^{1}$ 4-acetyl-2-iodophenol acetate (10), ${ }^{2}$ 4-formyl-2-iodophenol acetate (12), ${ }^{3}$ 4-iodoresorcinol diacetate (21), ${ }^{4}$ 1-iodo-2-naphthol acetate, ${ }^{5}$ 4-methoxy-2-iodophenol, ${ }^{6}$ 3-methoxy-2-iodophenol, ${ }^{7}$ E-1-phenyl-1,3-butadiene ${ }^{8}$ and 1,5,5-trimethyl-3-methylenecyclohexene ${ }^{9}$ were prepared according to literature procedures.

General iodination/acylation procedure. Compounds 16, 21 and 23 were prepared by direct acylation of the corresponding phenols. Compounds 5 and 7 were prepared by acylation of the corresponding $o$-iodophenols, which in turn were prepared by iodination of the corresponding phenols according to the procedure for the iodination of hydroxycoumarins ${ }^{7}$ indicated below.

Iodine ( 5.0 mmol ) dissolved in 50 mL of satd aq KI solution was slowly added to a solution of the corresponding phenol ( 5.0 mmol ) in the minimal amount of aq ammonia solution at $0-5{ }^{\circ} \mathrm{C}$. The resulting reaction mixture was stirred for 2 h , left overnight in the refrigerator, and then acidified by 20 $\% \mathrm{aq} \mathrm{HCl}$ to $\mathrm{pH}=4-5$. The precipitated $o$-iodophenol was extracted with ether, and the organic layer was washed with water. After evaporation of the ether, the resulting solid was dissolved in 20 mL of acetic anhydride (a minimal amount of DMF can be used as a co-solvent) in the presence of 1 mL of pyridine and stirred for 24 h at $100{ }^{\circ} \mathrm{C}$. Then the reaction mixture was quenched with chilled water
(caution, heat evolution!) and after 2 h extracted by $\mathrm{CH}_{2} \mathrm{Cl}_{2}$. The organic extract was washed with water and aq $\mathrm{NH}_{4} \mathrm{Cl}$ solution, and dried over anhydrous $\mathrm{MgSO}_{4}$ for 4 h . After evaporation of the $\mathrm{CH}_{2} \mathrm{Cl}_{2}$, the resulting white solid was purified by column chromatography using silica gel as a stationary phase and 5:1 hexanes-ethyl acetate as the eluent. The following compounds were prepared using this procedure.
